

Scope of Work 116 Union Street

The deck will be framed out of pressure-treated 2 x 8 same as the original deck that I'm adding to. I'm going to be removing the old decking and old rail which was hit by a tree (that's why it's broken) and replacing it with Trex Select decking. This will be extended to the new deck so it all matches. The color of the decking is saddle. The rail is Trex Signature in color bronze. The rail is made out of aluminum which is way nicer than anything I could make out of wood and much more expensive. I'm using hidden fasteners and it is going to blend into the cliff very nicely.

TREX SIGNATURE® RAILING

This modern line of aluminum railing and a variety of minimalist infill options are a testament to the refined beauty of negative space.
